

The year is 2062; humanity has found its way to the stars. Engineering and space exploration is the way forward and astral farming for resources has taken the human race to a new golden age of technology and research.

The resources from space farming have led to new advancements in technology. Robotic mechs, space ships, and technologically advanced cities and homes are now common place. Civilization has united to progress forward and form a new coalition.

Astral farming;  
a technique discovered by Dr. Brayden  
J. Hammerlock; via the use of tethers  
and passing buoys, resources from  
asteroid's chipped away led to new  
discoveries and advancements. Omichite,  
Charichite, Phabichite and other  
advanced metals were found to be more  
containable than nuclear isotopes when  
fused into energy.

A new view on space; star travel and resource mining created jobs for earthlings down below and uplifted most of the world's population out of poverty giving access to medicine, building materials and educational opportunities.

With society doing so well, a new generation of dreamers were born.

Space is a dangerous place; each landing was always a life or death event. A battlefield of flying rock and bizarre atmospheric conditions.

Despite the weather, fleets mobilized their mining crews to harvest resources due to the ever growing need for sustainable energy and it's advancements in technology.

Do you have what it takes to be in my crew?

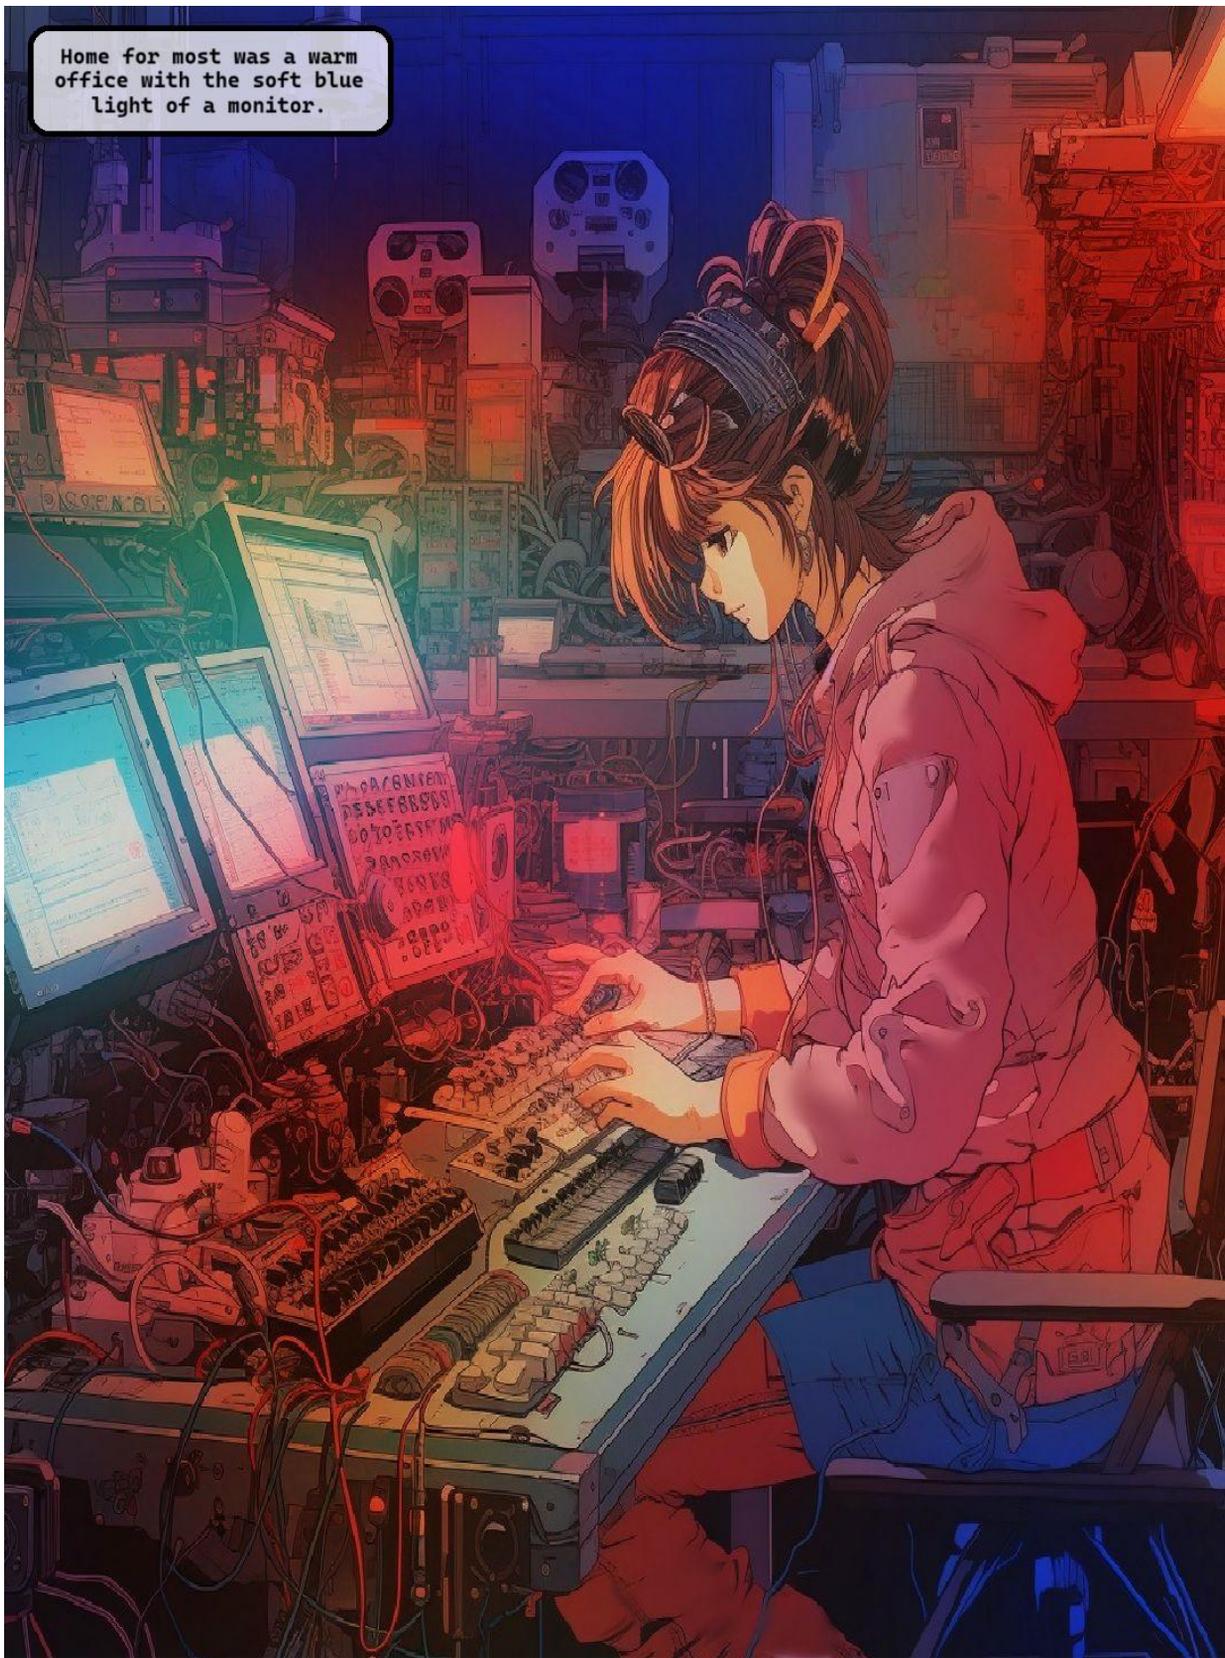

The space race had created unity and world peace.

The call for engineers had begun; self-taught, home-grown, street-borne, homeless, did not matter if you had the talent to work with the fleet.

Home for most was a warm office with the soft blue light of a monitor.

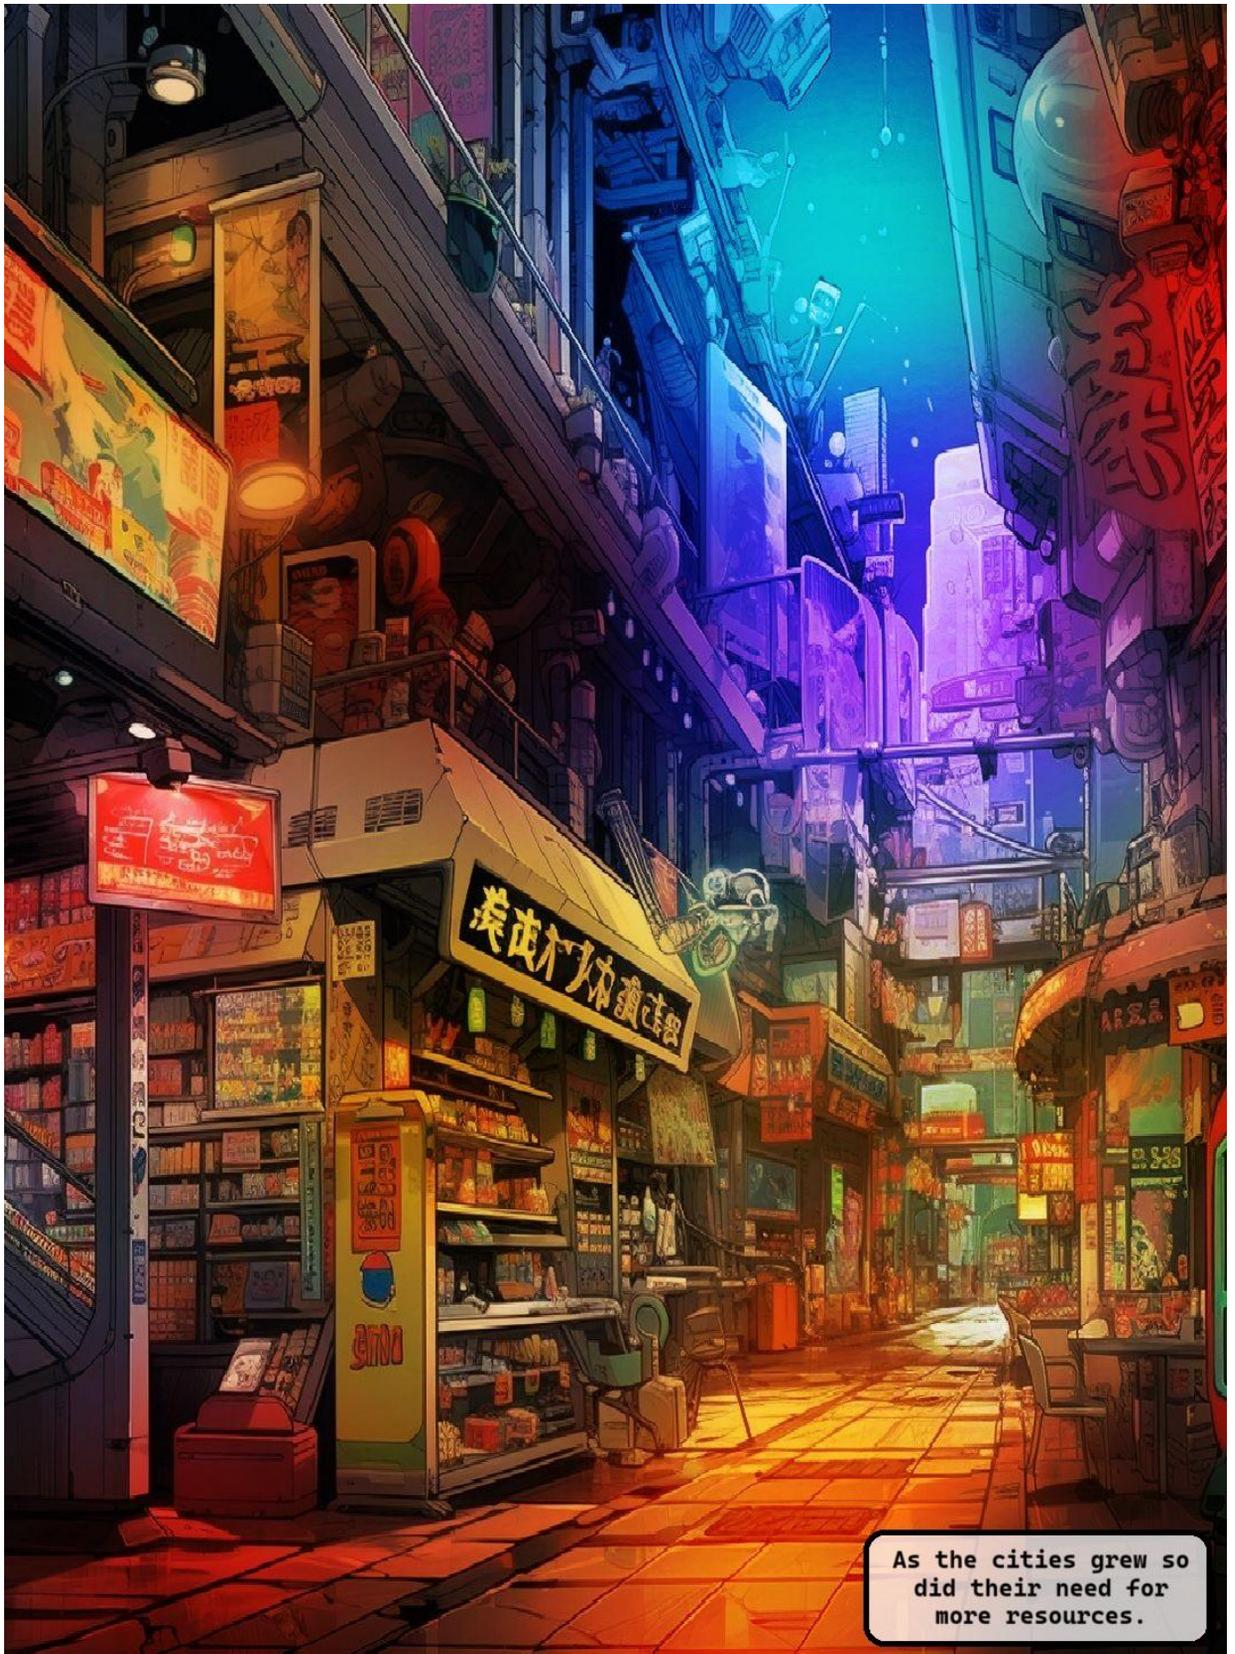

Better  
get  
that  
raise.

Gotta have  
this  
ready  
before ETA.

Everyday life of an  
engineer.

As the cities grew so did their need for more resources.

Nothing was out of reach any longer.

Engineering became the dominate field of study globally.

Backdoor cargo traders were a constant issue. Space crimes did not go unpunished.

Docks tonite, keep it down, don't want the sentry to pick up the convo...

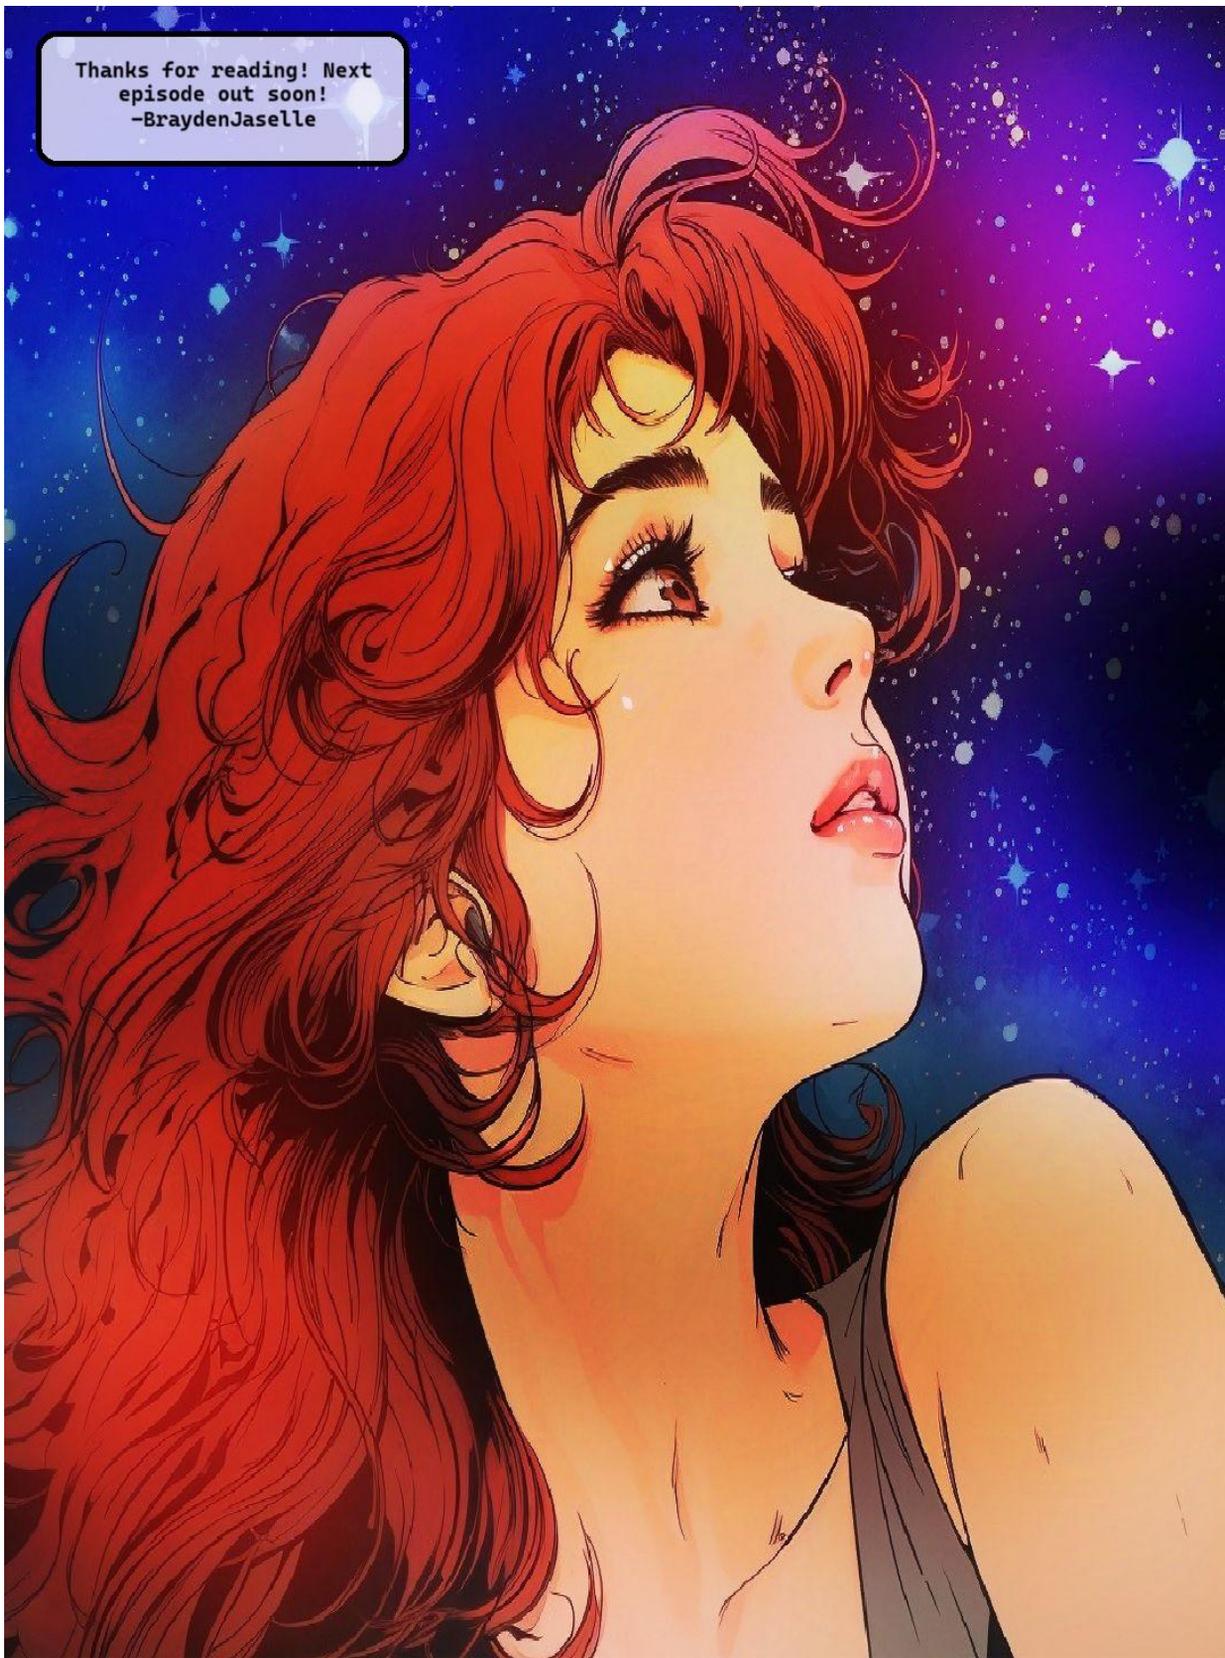

When does the ship return with the goods?

Society's appetite for cheap accessible goods had not changed; a new crime wave was about to begin...

Thanks for reading! Next  
episode out soon!
